- Tech Communities

PROFILE

Aspiring full-stack developer with strong backend and deployment skills. Experienced in building and deploying web applications using Node.js, React, MySQL, and Google Cloud. Passionate about creating user-friendly interfaces and writing clean, scalable code.

PROJECTS

Git Command Guide | Personal Project
Jun 2025 - Present
Frontend Developer

- Built a static documentation website using Jekyll to explain and demonstrate common Git commands.
- Customized and styled the theme for better readability and navigation.
- Deployed the site on Cloudflare Pages for fast, reliable hosting with continuous deployment.

F&B Shop Website | Personal Project
Dec 2024 - Present
Frontend Developer

- Build a static website with React to showcase shop details, menus, notifications, contact info and location
- Used SerpAPI to fetch and display customer reviews, accessed securely through a Cloudflare Workers proxy

I Like That Coffee | Final Year Project
July 2024 - Dec 2024
Full-Stack Developor

- Developed and deployed a location-based coffee recommendation web app using Node.js, MySQL, and Google Cloud.
- Built RESTful APIs to support content and location data, and integrated Google Maps for café discovery and user posts.
